M4 Defect Log & QA Testing Report
Project: m2-portfolio-Abetria
Tester: Student QA

Defect 1: Mobile View Navigation

Viewport Width: 320px
Symptom: The navigation links at the top appear in a vertical stacked layout, which increases scrolling on smaller screens.
Status: Reproduced
Hypothesis & Fix: Resolved by applying flexbox wrap and media queries to optimize spacing.

Defect 2: Image Margin on Mobile

Viewport Width: 320px
Symptom: The images touch or get too close to the edges when viewed at the smallest mobile width.
Status: Reproduced
Hypothesis & Fix: Added padding to the body container using CSS design tokens.

Defect 3: Tablet Card Layout

Viewport Width: 768px
Symptom: The card sections remain vertically stacked even though the tablet screen is wide enough for a multi-column layout.
Status: Reproduced
Hypothesis & Fix: Adjusted the grid template columns inside the min-width: 768px media query.

Defect 4: Tablet Font Sizing

Viewport Width: 768px
Symptom: The heading font sizes appear relatively small for a tablet screen scale.
Status: Reproduced
Hypothesis & Fix: Added font-size scaling for the body at the 768px breakpoint.

Defect 5: Desktop Readability

Viewport Width: 1440px
Symptom: Content stretches too wide across the center, making paragraph line lengths difficult to read comfortably.
Status: Reproduced
Hypothesis & Fix: Applied a max-width restriction to the card and section selectors to maintain optimal readability.

Defect 6: Desktop Padding/Spacing

Viewport Width: 1440px
Symptom: The spacing around the footer and layout borders looks insufficient on a large desktop monitor.
Status: Reproduced
Hypothesis & Fix: Added a 1024px and above media query to increase overall body padding.
